

Wi-Fi Chart Sharing

- This update allows for two Elite Ti2 units to be able to wirelessly share a map card inserted into a unit via the Wi-Fi connection
- For instructions on connecting two Elite Ti2 units together please refer to the Elite Ti2 operator's manual
- Once two Ti2 units are wirelessly networked the user can see and select a map card from the wireless unit via the chart page
- NOTE: Some functions on the "remote" display may not be available while the mapping card is being loaded to it wirelessly. If you are on the chart panel when a card is inserted in the other display you will see the message below, and your unit will be temporarily locked out while the data loads

Loading chart from networked device. Charting functionality is temporarily unavailable
